

SOLUTION OVERVIEW

Distributed Antenna Systems (DAS) Cell Booster

WHAT IT IS?

Network of spatially separated antennas that are connected to a common source to improve cellular signal coverage and capacity in a specific area

BENEFITS:

- Mobile Phone coverage
- Internet Connectivity
- Wireless Communication

APPLICATIONS:

Most Commonly:

- Commercial Buildings
- Hospitals
- Campuses

Struggling with spotty coverage or dead zones?

By strategically placing antennas throughout a building or large area, DAS ensures strong, consistent wireless signals everywhere—from offices to stadiums. Say goodbye to dropped calls and slow data speeds, and enjoy seamless connectivity that boosts productivity and user experience.
